

1 **ABSTRACT OF THE DISCLOSURE**

2

3 An expandable device for use in tubulars. The device comprises an outer tubular having a

4 series of slots therein, with the slots being arranged about the exterior of the outer tubular. The

5 device further includes an inner tubular disposed within the outer tubular, and a setting tool for

6 moving the outer tubular in a first direction in order to expand the outer tubular along the slots.

7 In one preferred embodiment, the slots are arranged about the outer tubular in a spiral pattern. In

8 yet another preferred embodiment, the slots are arranged about the outer tubular in a first spiral

9 pattern and wherein the first spiral pattern extends to a second spiral pattern. The setting tool, in

10 one embodiment, comprises an outer setting sleeve connected to the outer tubular and a mandrel

11 being connected to the inner member, and wherein the outer setting sleeve causes a downward

12 force against the outer tubular so that the outer tubular expands. A method of expanding a device

13 within a tubular is also disclosed.
